- **Significantly reduces labour hours and downtime required to change handrails**
- **Includes costs for splice kits, end preparations, and mould equipment shipping**

**Our Service Experts provide the highest level of handrail support and service, saving downtime and money.**

### Repetition Is Key

Our Service Technicians undergo extensive splice and handrail repair training, for escalator and moving walk handrails, having an average of 10 years experience (or 5000 splices). The splice is the weakest point on any handrail - entrust Draka EHC Certified Technicians with all of your field splice needs.

For new construction projects, it may be difficult to accurately determine the length of the handrail needed - the best solution is to overestimate the length and have the handrail spliced to fit at the jobsite. Field splicing can be especially difficult for maintenance companies if they only maintain a few escalators. Rely on Draka EHC to perform field splices allowing mechanics to focus on other projects.

**Entrust Draka EHC Certified Technicians with all your handrail field splice needs.**
